IDENTIFIERS Faculty Research

ABSTRACT

Results of the fourth annual survey of over 5,000 college faculty in all types of higher education institutions are reported. The information gathered is organized in eight categories: the goals of collegiate education; academic standards; attitudes about student life; teaching, research, and service; the status of the profession; views of the institution; participation in decision making; and general observations. Following an introductory narrative summary, results are presented in 104 tables within those categories. Data are arrayed by faculty age, gender, professional discipline, and institution type. Three major issues are identified: (1) some optimism but also great concern about aspects of academic quality, particularly the quality of students; (2) conflict between faculty interest in teaching and requirements for published research; and (3) respect for the institution and their role in it, but concern about institutional administration. The 1987 Carnegie classification of colleges and universities is appended, along with technical notes. (MSE)

<u>Number</u>	<u>Title</u>	<u>Page</u>
1	Undergraduate education in America would be improved if there were less emphasis on specialized training and more on broad liberal education	2
2	The number of general education courses required of all undergraduates should be increased	3
3	Apart from major field requirements, undergraduates should be required to take which of the following?	4
4	How important is it to enhance creative thinking in undergraduate education?	5
5	How important is it to provide a basic understanding of mathematics and science in undergraduate education?	6
6	How important is it to provide knowledge of history and the social sciences in undergraduate education?	7
7	How important is it to provide an appreciation of literature and the arts in undergraduate education?	8
8	How important is it to shape student values in undergraduate education?	9
9	How important is it to provide knowledge of one subject in depth in undergraduate education?	10
10	How important is it to prepare students for a career?	11
11	Undergraduates have become more careerist in their concerns	12

<u>Number</u>	<u>Title</u>	<u>Page</u>
12	Too many students ill-suited to academic life are now enrolling in colleges and universities	18
13	The undergraduates with whom I have close contact are seriously under-prepared in basic skills	19
14	This institution spends too much time and money teaching students what they should have learned in high school	20
15	On the whole, undergraduates are now more willing to work hard in their studies	21
16	Most undergraduates at my institution only do enough to get by	22
17	Grade inflation is a problem at my institution	23
18	Undergraduates today are more competitive academically	24
19	Undergraduates have become more grade conscious	25
20	Today's undergraduates are more willing to cheat in order to get good grades	26
21	There has been a widespread lowering of standards in American higher education	27
22	Academic standards for undergraduate admissions at my institution should be . . .	28
23	Academic standards for bachelor's degrees at my institution should be . . .	29
24	Undergraduates have become more conservative in lifestyle	34

<u>Number</u>	<u>Title</u>	<u>Page</u>
25	Undergraduates have become more conservative politically	35
26	There is more alcohol abuse among today's undergraduates than five years ago	36
27	There is more drug abuse among today's undergraduates than five years ago	37
28	There is more violence and crime perpetrated by off-campus criminals now	38
29	There is a growing trend among undergraduates to isolate themselves in small groups	39
30	Do your interests lie primarily in research or in teaching?	43
31	In my undergraduate courses, I prefer teaching students who have a clear idea of the career they will be following	44
32	Teaching effectiveness should be the primary criterion for promotion of faculty	45
33	How important are student evaluations of courses for granting tenure in your department?	46
34	Are you currently engaged in any scholarly work that you expect to lead to a publication, an exhibit, or a musical recital?	47
35	In my department it is difficult for a person to achieve tenure if he or she does not publish	48
36	How important is the number of publications for granting tenure in your department?	49

<u>Number</u>	<u>Title</u>	<u>Page</u>
37	At my institution publications used for tenure and promotion are just counted, not qualitatively measured	50
38	The pressure to publish reduces the quality of teaching at my university	51
39	At my institution we need better ways, besides publications, to evaluate the scholarly performance of the faculty	52
40	The undergraduate curriculum has suffered from the specialization of faculty members	53
41	How important to you is your relationship with undergraduates?	54
42	Undergraduates should seek out faculty only during posted office hours	55
43	I enjoy interacting informally with undergraduates outside the classroom	56
44	Fewer faculty members provide positive role models to our undergraduates than in the past	57
45	During the past 12 months, did you receive research support from federal agencies?	58
46	During the past 12 months, did you receive research support from institutional or departmental funds?	59
47	During the past two years, have you served as a paid or unpaid consultant to a private business or industry?	60
48	During the past two years, have you served as a paid or unpaid consultant to schools (elementary or secondary)?	61
49	Faculty members in high schools and colleges should work together to improve education in my discipline	62

<u>Number</u>	<u>Title</u>	<u>Page</u>
50	Exciting developments are now taking place in my discipline	71
51	In my discipline, most faculty agree on the standards of good scholarship	72
52	This is a poor time for any young person to begin an academic career	73
53	How have job prospects for undergraduates in your field changed over the past five years?	74
54	If I had it to do over again, I would not become a college teacher	75
55	I am more enthusiastic about my work now than when I began my academic career	76
56	I often wish I had entered another profession	77
57	During the past two years, have you ever considered a permanent departure from academia?	78
58	I feel trapped in a profession with limited opportunities for advancement	79
59	I tend to subordinate all aspects of my life to my work	80
60	I hardly ever get time to give a piece of work the attention it deserves	81
61	My job is the source of considerable personal strain	82
62	How would you rate your own salary?	83
63	On the whole, faculty salaries here have kept up with the rate of inflation	84
64	During the past two or three years, financial support for work in my discipline has become harder to obtain	85

<u>Number</u>	<u>Title</u>	<u>Page</u>
65	I would exercise an early retirement option if it were offered to me	86
66	I look forward to retirement as an enjoyable period of my life	87
67	In general, how do you feel about your institution?	95
68	The administration here supports academic freedom	96
69	Undergraduates at <u>my institution</u> are not getting as good an education as they did five years ago	97
70	Rate the performance of your institution in providing undergraduates with a general education	98
71	Rate the performance of your institution in preparing undergraduates for a career	99
72	Rate the performance of your institution in providing undergraduates with the opportunity to explore a subject in depth	100
73	Rate the performance of your institution in strengthening their values of undergraduates	101
74	Rate the performance of your institution in creating opportunities for undergraduates to engage in public service	102
75	in the next five years, I expect that some of the tenured faculty here will lose their jobs due to lack of funds	103
76	Many young faculty members at this institution will leave because it is tenured in	104
77	I am satisfied with the results of affirmative action at this institution	105

<u>Number</u>	<u>Title</u>	<u>Page</u>
78	My institution provides the conditions and support for faculty to retire with dignity	106
79	How would you rate the administration at your institution?	107
80	Do you feel that the administration of your institution is autocratic or democratic?	108
81	There are more part-time and adjunct faculty members at this institution today than there were five years ago	109
82	In my department tenure is now more difficult to achieve than it was five years ago	110
83	My institution is managed effectively	111
84	My institution has serious financial problems	112
85	How would you rate the quality of life at your institution?	113
86	How would you rate the intellectual environment at your institution?	114
87	How would you rate the sense of community at your institution?	115
88	How important to you is your college or university?	116
89	How important to you is your academic discipline?	117
90	How important to you is your department?	118
91	How important to you are national or international societies in your discipline?	119

<u>Number</u>	<u>Title</u>	<u>Page</u>
92	How has departmental morale changed over the past five years?	120
93	How much opportunity do you have to influence the policies of your institution?	130
94	How much opportunity do you have to influence the policies of your department?	131
95	Indicate the extent to which you participate in departmental faculty meetings at your institution	132
96	Indicate the extent to which you participate in campus-wide faculty committee meetings at your institution	133
97	Indicate the extent to which you participate in faculty senate (or comparable campus-wide faculty unit) meetings at your institution	134
98	Indicate the extent to which you participate in administrative advisory committee meetings at your institution	135
99	I am apprehensive about the future of this country	138
100	I am less confident today than I used to be about the capacities of higher education to help make a better society	139
101	The United States is creating an overtrained work force in terms of available jobs	140
102	Performing sponsored research for a private company is not a proper university activity	141
103	The abolition of faculty tenure would, on the whole, improve the quality of American higher education	142
104	How would you characterize yourself politically at the present time?	143

FOREWORD

by Ernest L. Boyer

From the very first, The Carnegie Foundation for the Advancement of Teaching has had an abiding interest in the status of college faculty. The Foundation began in 1905 with the goal of easing financial hardship among retired professors, but that specific purpose quickly broadened into a more general one about the condition of the professoriate overall. We have never lost sight of that concern.

To underscore our commitment to college teaching, the Foundation has, over the years, conducted a series of surveys that has helped to clarify the status of the professoriate and, in a larger sense, provide a portrait of American higher education.

Early in 1989, the Foundation gathered information from more than 5,000 faculty members at all types of higher learning institutions. We included many questions asked before, as well as a series of new ones about campus community, students, tenure, and retirement. We have organized the findings of our most recent survey in the following eight areas:

- the goals of collegiate education
- academic standards
- attitudes about student life
- teaching, research, and service
- status of the profession
- views of the institution
- participation in decision-making
- general observations

Further, because of variation in faculty attitudes, we have organized the data in the tables that follow on the basis of age, gender, professional discipline, and institutional type. In addition, we occasionally present data gathered in our prior surveys to show trendlines.

Three issues emerged in this, our fourth national survey, that vividly define the optimism, as well as the concerns, of the professoriate today.

The first issue relates to academic quality. We found that since 1984, the faculty have dramatically confirmed their commitment to liberal learning. A majority of faculty also feel students should study a core of general education subjects, and they believe that "becoming proficient in creative thinking" is the most important goal of undergraduate education.

Faculty are increasingly optimistic about their own profession. We found, for example, that two-thirds feel this is a good time for a young person to begin an academic career, and about half believe that in the last five years job prospects in their field have gotten better. Only 12 percent conclude they've gotten worse. In addition, 77 percent of today's professors say that "if I had it to do over again, I would become a college teacher."

Three out of four faculty also believe that their college is providing above-average general education for its students and is doing a good job of preparing students for careers. A majority also report that students are being provided a good opportunity to explore a subject in depth. All of this suggests a robust condition within the professoriate.

On the darker side, today's faculty present a discouraging portrait of students, both in the classroom and beyond. At the very time professors are calling for more liberal education, 84 percent report that undergraduates at their institution have become more careerist in their concerns.

Even more troublesome, about two-thirds of the faculty say that too many students are ill-prepared for academic life, and they conclude that their institution spends too much time and money teaching students what they should have learned in high school.

Faculty also feel that grade inflation is a serious problem at their institution, and by a two-to-one margin they believe that today's students are more willing to cheat in order to get good grades. While most faculty feel *their* college offers a good education, they also conclude that, overall, there has been a "widespread lowering of standards in higher education." It's not surprising, therefore, that most believe that both admission *and* graduation standards should be raised.

Beyond this, faculty expressing an opinion report that there is more alcohol and drug abuse among students, more violence on campus, and a growing trend among undergraduates to isolate in small groups.

Thus, professors have deepened their commitment to liberal learning. They are optimistic about prospects in their profession, and they appear to be quite satisfied with the quality of undergraduate education at their own institution. But they judge negatively the academic preparation of students and the quality of student life outside the classroom.

Faculty have always been less than fully satisfied about the academic seriousness of their students, but trendlines reported here reinforce the fact that colleges can be no stronger than the nation's schools, and that public education, despite six years of reform, is still producing inadequately prepared students.

We conclude that college professors should join with colleagues in the schools to strengthen academic standards, focusing especially on the writing proficiency of students. We commend the National Writing Project and other school partnerships, and we're encouraged that over 80 percent of those responding to our survey agreed that faculty members should work with

surrounding schools to improve education. Acting on this commitment is essential, if quality in higher education is to be achieved.

The second major issue relates to teaching and research. Over 70 percent of today's faculty say that their interests lie in teaching, and a significant percentage also conclude that "teaching effectiveness should be the primary criterion for promotion." Further, faculty overwhelmingly say they enjoy interacting informally with undergraduates *outside* the classroom, and most reject the notion that students should seek faculty help *only* during posted office hours. Clearly, the majority of faculty consider teaching to be a central mission and enjoy the time they spend with students.

But most faculty at the four-year institutions also report that the reward system is heavily weighted toward published research, not effective teaching, and more than one-third of faculty support the proposition that at their institutions, publications are "just counted, not qualitatively measured." Even at research universities, a surprising 42 percent agree with this conclusion.

The irony is that while pressures for research and publication keep going up, faculty report that federal and institutional support for such activity is going down.

Research is essential to American higher education. Now, more than ever, scholars must discover new knowledge and advance the frontiers of their field. Therefore, funding for basic research should be expanded, not diminished. But, the nation's colleges and universities enroll, every year, over 12 million students of great diversity and in so doing, accept a profoundly important obligation also to promote excellence in teaching.

What we need, then, in higher education is a reward system that reflects the diversity of our institutions and the breadth of scholarship, as well. The challenge is to strike a balance among teaching, research, and service, a position supported by two-thirds of today's faculty who conclude that, "at my institution, we need better ways, besides publication, to evaluate scholarly performance of faculty."

The third issue is how faculty feel about the institution where they work. It's significant, we believe, that over 90 percent of today's faculty say their institution is a "very good" or "fairly good" place to work, and most agree that the administration at their college or university supports academic freedom. We also are impressed that the percentage of faculty who feel their institution is "very important" to them has increased since 1984, from 29 to 40 percent.

Further, in spite of the deficiencies of undergraduates in American higher education, most faculty believe that students at their institution are getting as good an education as they did five years ago.

Faculty also seem to feel quite good about the degree to which they participate in decision-making on campus. For example, 69 percent say they have an opportunity to influence, at least somewhat, policies at their institutions; within their departments, it's 96 percent. Well over 90 percent of the faculty say they participate in departmental meetings, while over 40

percent report participating in campus-wide meetings of the senate. In general, then, American professors believe they at least have some control over professional decisions that affect their lives.

But we also found that, once again, about two-thirds of today's faculty rate the administration at their campus as either "fair" or "poor." Even more disturbing, 69 percent feel that their administration is "autocratic." The exception is the liberal arts college, where faculty view campus leaders as being somewhat more "democratic."

Faculty evaluate their institutions rather negatively in other ways as well. For example, only half feel their college or university is managed effectively, and in significant numbers, they rate the intellectual environment and the sense of community on campus as either "fair" or "poor."

How, then, should these somewhat contradictory patterns of opinion be interpreted? The negative feelings faculty have about administrators may relate, at least in part, to the size of the institution, since liberal arts and two-year college faculty are more generous in their ratings. As bureaucracy grows, faculty frequently are more removed from decision-making on campus. Full information about complicated issues becomes more difficult to disseminate, and those who make campus-wide decisions, appear, from afar, to be autocratic.

Further, colleges and universities feel pressures to cut costs and tighten administrative control, while, at the same time trying to satisfy competing interests. In such a climate, it's understandable that faculty feel at times that their particular concerns are not adequately supported.

If the college or university is to be a community of learning, effective governance is essential. Better forums are needed to address common educational questions, so that credibility in the decision-making process can be strengthened. Without such arrangements, the institution drifts, larger purposes are blurred, and the unity of the higher learning enterprise is lost.

Despite the tensions, we believe the American professoriate is, today, in a healthier state than it was five years ago. We found in our survey a feeling of optimism among professors about their disciplines and a renewed commitment to liberal learning. We also found that faculty feel quite satisfied in some important ways about the places where they work.

At the same time, we cannot overstate our sense of urgency about the problems faculty have defined—the decline of academic standards among students, the ambivalence they feel about teaching and research, and the lack of confidence they have in campus leadership. How the academy confronts these essential issues surely will shape the quality of higher education for years to come.

The Goals of Collegiate Education

In their response to the Carnegie survey, the nation's faculty express an impressive commitment to liberal education. There is widespread agreement on the fundamental goals of an undergraduate education, and a majority of faculty believe this education would be improved if there were more emphasis on broad liberal learning and less on specialized training. It is interesting to note that the number of faculty who support this view has been growing since 1975.

At the same time, faculty are less certain about how to translate a commitment to liberal education into curricular improvements. While the majority of faculty believe undergraduates should take either a common core or breadth requirements, only 37 percent conclude that the number of general education courses required of undergraduates should be increased. Core courses are a slight favorite, but they have declined in popularity since 1984, while breadth requirements have increased. Obviously, faculty feel that requirements are essential to an undergraduate education: only 1 percent believe there should be none at all.

While creative thinking has long been one of the most important goals faculty promote in an undergraduate education, it now rates above all others. Indeed, the number of faculty who consider it very important has increased sharply in the past five years. Comments that faculty made to us on our survey suggest that the change is rooted in their classroom experience. As one professor put it, "For our students, abstract thinking is very difficult." Another remarked, "We need to work to re-emphasize thinking and creativity in students."

Faculty also rate other goals highly. A majority believe it is very important to provide a basic understanding of math and science, knowledge of history and the social sciences, and an appreciation of literature and the arts. More than 40 percent of the professors we surveyed believe that shaping student values is also a very important part of an undergraduate education.

In light of their commitment to liberal goals in education, it is unsurprising that faculty consider career training a lower priority in undergraduate experience. Less than a third believe that providing knowledge of one subject in depth or preparing students for a career is very important. In fact, the number of professors who feel that career preparation is very important has been declining since 1975.

Further, faculty register their continuing concern about what they believe is inordinate careerism among today's undergraduates. Overwhelmingly, faculty report that students are more careerist in their concerns. This creates, potentially, a troubling tension on campus, with student and faculty interests moving in opposite directions.

Academic Standards

Faculty are concerned that academic standards in higher education are eroding. Indeed, faculty feel that the students in their classrooms have not achieved the learning they need to succeed in higher education. Specifically, 64 percent of those we surveyed agree that too many students now enrolling in colleges are ill-suited to academic life, and three-quarters say that undergraduates with whom they have close contact are seriously underprepared in basic skills.

These opinions suggest that the nation's schools are, in fact, failing to equip students with the basic skills they need to pursue advanced degrees successfully. Thus, 68 percent of the faculty say their institution is spending too much time and money teaching students what they should have learned in high school. Despite the sustained efforts of education reformers to improve schools, the dissatisfaction of faculty remains unchanged from five years ago.

Especially revealing is the fact that professors feel students themselves contribute to the slackening of academic standards. A majority disagree with the idea that undergraduates are now more willing to work hard in their studies. Fifty-five percent suggest that most undergraduates do only enough to "get by."

At the same time, faculty themselves seem to take some responsibility for the decline in quality that they describe: 62 percent note that grade inflation is a problem at their institution. As one professor told us, "My institution has less grade inflation than most, but I have taught at supposedly prestigious schools where the students get away with murder. I have had students turn in unfinished papers (when I was a visiting professor elsewhere), knowing that the department gave out no grades lower than a B-."

Even as faculty describe students as less willing to work for a grade, they also describe them as more concerned about the grade they get. Some 42 percent say students are more competitive academically. A solid 70 percent say undergraduates have become more grade-conscious. Perhaps most disturbing is that a significant minority of the faculty say undergraduates are more willing to cheat to get good grades.

Taken together, these opinions paint a disturbing picture of academic quality. When faculty reflect upon the matter in general, two-thirds conclude that there has been a widespread lowering of standards in higher education. To correct the situation, professors would like to see more rigorous standards applied. Specifically, higher admission standards are suggested by 57 percent of all faculty, and the same number at four-year colleges would like to see higher standards for bachelor's degrees.

[Faculty at four-year institutions]

Attitudes About Student Life

Faculty are concerned about student life outside the classroom. Indeed, the responses of faculty to questions about the quality of student life on campuses today raise disturbing questions about the college community in its broadest sense.

We found that a third of faculty agree that there is more alcohol abuse and drug abuse among undergraduates today than five years ago. About 20 percent disagree, and 47 percent gave a neutral response to this item.

The quality of life at institutions is further diminished by crime, according to this survey. Disturbingly, 50 percent of faculty agree that there is more crime and violence on campus being committed by off-campus criminals now. While colleges should not be sealed off from the rest of the world they should provide environments where students feel reasonably safe and secure. We should look at whether this condition is disappearing.

A majority of faculty believe that undergraduates have become more conservative in their lifestyle. An even larger number—83 percent—say that undergraduates have become more conservative politically. Such views, of course, may simply indicate the more liberal nature of the faculty.

Finally, nearly a third of the professors we surveyed note a growing trend among undergraduates to isolate themselves in small groups. It seems reasonable to suggest that students should be spending more time, not less, with different groups of peers. It is only through communal experience—which is key to the undergraduate years—that students can gain a greater understanding of diversity, and learn to celebrate it.

Teaching, Research, and Service

One of the major issues we explored in our survey is the relationship between teaching and research. Over 70 percent of professors say that their interest is primarily in or leaning toward teaching, a heartening commitment to the education of students, although one that has declined somewhat since 1969.

Professors express this support for teaching in other ways, too. A strong majority of faculty agree that teaching effectiveness should be the primary criterion for faculty promotion. This figure, however, has been steadily declining since 1975, a worrisome trend. Yet teaching is clearly an important factor in tenure decisions: 67 percent of faculty report that student evaluations are either very important or fairly important in decisions to grant tenure.

Despite faculty support for teaching, professors are plainly experiencing increased pressure to publish. Nearly two-thirds of faculty say that they are engaged in work that they expect to lead to a publication, exhibition, or recital. Fifty-four percent agree that it is difficult to receive tenure without publishing, a rise from 41 percent since 1969. At four-year institutions, the figure is even higher.

Scholarship is of vital importance to the academic enterprise. Faculty, however, wonder if quantity is now more important than quality in published research. Over half believe that the *number* of publications is very important or fairly important in tenure decisions. Thirty-eight percent say that at their institutions publications are merely counted and not qualitatively measured.

These opinions are disturbing. Even more so is the view of over a third of the faculty that pressure to publish reduces the quality of teaching at their university. In fact, 44 percent of faculty report that the undergraduate curriculum has suffered because of faculty overspecialization.

This suggests that an appropriate balance between teaching and research has yet to be struck at many colleges. Indeed, faculty themselves recognize that the pressures may be out of hand: 68 percent agree that there need to be better ways, besides publications, to evaluate scholarly performance.

Ironically, faculty report that, just as the pressure to produce scholarly work is growing, support for it is shrinking. Only 18 percent of faculty received research support from the federal government in the past year. Even more surprising, only 41 percent received support from institution or department funds. Both these figures have dropped significantly in just five years.

leaving faculty to face less support but greater demands for research.

It is reassuring to note that increased scholarly pressures have not diminished professors' commitment to the students themselves. Over 90 percent say that their relationship with undergraduates is very or fairly important to them, and 78 percent reject the idea that undergraduates should seek faculty out only during posted office hours. Moreover, 83 percent told us that they enjoy interacting informally with undergraduates outside the classroom. Obviously, in spite of their concerns about students' attitudes and behavior, faculty like their students and are committed to teaching them.

A significant minority of professors believe that fewer faculty members than in the past provide positive role models for undergraduates.

We were encouraged to find that a third of faculty reported that they provided advice, free or for a fee, to elementary or secondary schools in the past two years. In the nationwide effort to improve our schools, this is an important development. Faculty support is strong. Indeed, 82 percent of professors told us that faculty in high schools and colleges should work together to improve education in their discipline. As more and more faculty act upon this commitment, education at all levels should improve, and faculty concern about basic skills of freshmen will decline. This is an area of genuine opportunity and, hopefully, faculty will act on this commitment to cooperate with schools.

Status of the Profession

An important element of academic quality is the faculty's feelings about their profession. We examined these attitudes within the professoriate today in terms of excitement about their field of study and agreement with colleagues about the standards of good scholarship; of job prospects for young faculty members; of general enthusiasm about their career; of stress; and of financial support in salaries and in funding for scholarship.

Faculty responses were fairly upbeat. Although financial support for research appears to have become harder to obtain, 56 percent find a general agreement about what constitutes good scholarship, and 77 percent say that exciting things are happening in their fields.

When asked if this was a "poor time for any young person to begin an academic career," 66 percent of our respondents disagreed, with about half indicating that job prospects for undergraduates in their fields are better than they were five years ago. In spite of the fact that 44 percent of responding professors find their work a source of considerable strain in their lives, they do not regret having chosen that path. A significant 74 percent disagreed with the statement: "I often wish I had entered another profession."

These responses, combined with the strong importance faculty attach to their academic discipline, which we report in Chapter 6, reveal an overall positive attitude about the profession itself.

Our findings regarding financial issues are less encouraging. Although faculty salary ratings have begun to recover from their 1984 low, there is general agreement, at all types of institutions, that salaries have not kept up with the rate of inflation. Further, considering the importance of research, which often requires supplemental support, it's significant that, according to the faculty, research funds are increasingly difficult to obtain. Again, this is true at all types of institutions.

Also, we were struck by the pressure faculty feel about their professional activity. Forty-four percent told us that their work "is the source of considerable personal strain," and nearly the same number say they hardly ever get time to give a piece of work the attention it deserves. The age of the respondent is significant on questions about stress, with younger faculty feeling more pressure than older colleagues. Among the disciplines, engineering faculty report more stress than their colleagues in other fields.

The feelings of much of the professoriate might be summed up by these remarks from a professor at a Research university:

You have to be a workaholic to do this job, but I personally can't imagine another setting that has such high intellectual expectations *and* provides such autonomy as this occupation. It is not always a joy, but it represents the best job for me. I'm in for the duration.

Another professor expressed similar sentiments when he told us:

For all of the dissatisfaction I have registered in the preceding pages, I regard my career as a teacher and scholar as a great privilege, which I would not give up for any amount of money. After 19 years, I enjoy teaching more than ever and become restless if on leave.

Views of the Institution

Faculty satisfaction with their particular institution is closely related to their feelings about a range of key issues:

- administration, including commitment to academic freedom, support of faculty, and management effectiveness;
- the quality of the undergraduate education offered;
- professional issues, such as tenure, job security, and retirement prospects;
- quality of life, including the quality of the intellectual environment, the sense of community, and the degree of identification faculty feel with their discipline, department, and institution;
- financial stability of the institution;
- and the issue of affirmative action.

Faculty have, we suspect, always had mixed feelings about their administrations, and surely there is ambivalence today. Only half the faculty we surveyed believe that their institutions are managed effectively, and two-thirds say administrations are autocratic. They agree that the administrators support academic freedom, yet they rate overall administrative performance only "fair" or "poor."

American professors give relatively good grades to the undergraduate education programs offered at their institution. They believe their college or university is doing a good job in providing undergraduates with an "excellent" or a "better than adequate" general education, and are also doing well in preparing them for a vocation or career. They believe, too, that the places where they work are providing undergraduates with the opportunity to explore a subject in depth. Two-thirds feel that their college or university performs adequately or better in strengthening the students' values.

Although faculty are not worried about a loss of jobs due to lack of funds in the near future, they suggest that administrations may be resorting to other measures to save money on faculty salaries. For example, 58 percent of responding faculty members report that the number of part-time and adjunct faculty has increased over the past five years. Based on other comments received, we believe this hiring practice may contribute at least in part to negative views by faculty of their administration.

According to our most recent survey, about half the faculty feel tenure is harder to get than it was five years ago; this is a decline from 68 percent in 1984.

We also found that in spite of the use of part-time and adjunct instructors, and even though tenure is still difficult to achieve, only 20 percent of respondents believe that many young professors will leave because of a shortage of tenure positions.

On the more personal matter of retirement, 56 percent agree that the institution provides the conditions and support for them to retire with dignity.

Faculty are evenly split between those who rate the quality of life on their campus "good" or "excellent" and those who rate it only "fair" or "poor." Liberal Arts and two-year faculty are happier on this general issue, and positive ratings also rise with age. Men give higher positive ratings than do women. A majority of today's faculty consider the intellectual environment on campus to be "fair" or "poor." But the ratings are best at Research and Liberal Arts institutions.

The absence of community is disturbing. Sixty-three percent of the faculty say the sense of community at their institution is only "fair" or "poor." As might be expected, faculty at Liberal Arts and two-year colleges give the highest ratings to the sense of community, and those at Research and Doctorate-granting institutions give the lowest.

We found that, once again, faculty identify strongly with their academic discipline, less so with their department, and still less with their institution. We believe it is significant, however, that the number of faculty who say their college or university is "very important" to them has increased dramatically since 1984, rising from 29 to 40 percent.

Overall, opinions among faculty about college finances are evenly split. Faculty at two-year colleges, however, perceive less serious financial problems at their institutions than do faculty at four-year institutions.

The results of affirmative action efforts on campus are felt to be satisfactory by half the faculty, with 21 percent reporting neutral responses, and 30 percent reporting dissatisfaction with the results. Older faculty and faculty at two-year institutions appear to be the most satisfied on this issue.

Participation in Decision-making

The involvement of faculty in the governance process is essential to the development of an effective learning community. This survey, like others before it, reveals great diversity in the extent of faculty participation in decision-making. The size of the institution largely determines the nature and extent of faculty involvement in policy decisions, with more participation seen by a greater proportion of the faculty at smaller institutions.

As might be expected, faculty participation at the departmental level approaches 90 percent and is relatively uniform across academic rank and gender. Seventy-three percent say they have a lot of opportunity to influence policy at the departmental level.

A third of the faculty report participating as well in campus-wide faculty committee meetings. The degree of actual influence at this level, however, is necessarily more restricted. One is appointed or elected to many of these decision-making bodies, and membership is a small percentage of all eligible faculty.

Faculty, both in the data and in the written comments, expressed ambivalence about their ability to influence decision-making at their institutions. One professor in the fine arts at a Comprehensive university expressed his frustration with the inability to affect policy. "Communication from the upper administration downward is seriously inadequate; similarly, there is no system of assuring faculty input into decisions—and no visible way in the future for the faculty to become meaningfully involved in our own destiny." But an assistant professor in the physical sciences at a Liberal Arts college took her peers to task in her comments to us:

Faculty members here are not helpless in changing policies and correcting deficiencies. There is much room for improvement here, but too many faculty members are totally passive. Faculty members who "care" can bring about great positive change—energy and enthusiasm are not met with disapproval here.

General Observations

Faculty are apprehensive about the future of the nation. The pessimism regarding the nation's future cuts across all institutional, disciplinary, and gender groups.

Over half of our respondents describe themselves as moderately liberal or liberal politically, with a quarter describing themselves as moderately conservative or conservative. A small cluster describe themselves as "middle of the road."

Today's faculty are about equally divided about the capacity of higher education to shape a better society. Faculty expressing the least confidence in higher learning are those over 60, and those in the social sciences.

On a related matter, 60 percent of responding faculty reject the notion that colleges and universities are creating, in society today, an overtrained work force.

Finally, nearly 30 percent of the faculty agreed that "the abolition of faculty tenure would, on the whole, improve the quality of American higher education." Not surprising, this feeling was most prevalent among younger faculty members. Other findings indicate that faculty are more disturbed over the criteria used to judge tenure worthiness than over tenure itself. This is an important issue for the professoriate, since it deals with the balance between teaching and research and, of course, the most important factor of all—the preservation of academic freedom.

I Am Apprehensive About the Future of This Country

(percent agreeing)

APPENDIX A

Technical Notes

Data in this report are derived from The National Survey of Faculty conducted in 1989, and occasionally data from previous surveys.

This most recent survey was conducted for The Carnegie Foundation for the Advancement of Teaching by the Wirthlin Group of McLean, Virginia. A two-stage, stratified, random sample design was used. In the first stage, college and universities were selected; in the second, faculty were designated. For each of the 9 Carnegie Classification types, 34 institutions were selected for a total of 306 colleges and universities. Within each type, an institution was selected with a likelihood proportionate to the size of its faculty compared to the others within that type.

For selecting faculty within the designated colleges and universities, an *n*-th name selection process was used. The 9,996 faculty in the sample were equally divided among Carnegie Classification types. Usable returns numbered 5,450, a 54.5 percent completion rate.

For conducting the analysis, faculty responses were weighted by Carnegie Classification type. The weight used for each type was proportionate to its relative size within the total for all types. Size was defined as the total number of faculty.

The data presented in this publication for the years 1989, 1984, and 1975 are for faculty having full-time appointments. The 1969 data are from all responding faculty.

For several tables in this report, item response categories have been combined as follows: "strongly agree" and "agree with reservations" = "agree"; "strongly disagree" and "disagree with reservations" = "disagree"; "much better" and "somewhat better" = "better"; "much worse" and "somewhat worse" = "worse"; "much higher" and "somewhat higher" = "higher"; "much lower" and "somewhat lower" = "lower"; "a great deal" and "quite a lot" = "a lot."

APPENDIX B

Carnegie Classifications

The 1987 Carnegie Classification includes all colleges and universities in the United States listed in the 1985-86 *Higher Education General Information Survey of Institutional Characteristics*. It groups institutions into categories on the basis of the level of degree offered—ranging from prebaccalaureate to the doctorate—and the comprehensiveness of their missions. The categories are as follows:

Research Universities I: These institutions offer a full range of baccalaureate programs, are committed to graduate education through the doctorate degree, and give high priority to research. They receive annually at least \$33.5 million in federal support and award at least 50 Ph.D. degrees each year.

Research Universities II: These institutions offer a full range of baccalaureate programs, are committed to graduate education through the doctorate degree, and give high priority to research. They receive annually between \$12.5 million and \$33.5 million in federal support and award at least 50 Ph.D. degrees each year.

Doctorate-granting Universities I: In addition to offering a full range of baccalaureate programs, the mission of these institutions includes a commitment to graduate education through the doctorate degree. They award at least 40 Ph.D. degrees annually in five or more academic disciplines.

Doctorate-granting Universities II: In addition to offering a full range of baccalaureate programs, the mission of these institutions includes a commitment to graduate education through the doctorate degree. They award annually 20 or more Ph.D. degrees in at least one discipline or 10 or more Ph.D. degrees in three or more disciplines.

Comprehensive Universities and Colleges I: These institutions offer baccalaureate programs and, with few exceptions, graduate education through the master's degree. More than half of their baccalaureate degrees are awarded in two or more occupational or professional disciplines such as engineering or business administration. All of the institutions in this group enroll at least 2,500 students.

Comprehensive Universities and Colleges II: These institutions award more than half of their baccalaureate degrees in two or more occupational or professional disciplines, such as engineering or business administration, and many also offer graduate education through the master's degree. All of the colleges and universities in this group enroll between 1,500 and 2,500 students.

Liberal Arts Colleges I: These highly selective institutions are primarily undergraduate colleges that award more than half of their baccalaureate degrees in art and science fields.

Liberal Arts Colleges II: These institutions are primarily undergraduate colleges that are less selective and award more than half of their degrees in liberal arts fields. This category also includes a group of colleges that award less than half of their degrees in liberal arts fields but, with fewer than 1,500 students, are too small to be considered comprehensive.

Two-Year Community, Junior, and Technical Colleges: These institutions offer certificate or degree programs through the Associate of Arts level and, with few exceptions, offer no baccalaureate degrees.
